Customer Discovery & Design Partner Program

What we have learned, how the design partner program is structured, and what it is designed to prove.

This document states plainly where Global Office stands. The platform is production-ready and pre-revenue. The design partner program is the mechanism by which narrative assumptions are converted into evidence.

1. Discovery findings

- Tool fragmentation is universal in the target segment: eight to twelve disconnected systems in a typical 20–200 person organization, with operational truth reconstructed manually each week.
- The pain that gets budget is not 'we need another tool' — it is leadership not knowing the real state of execution without asking three people.
- AI is widely used but as an add-on to chaos: assistants with no memory of the organization, producing generic output that a manager must still verify.
- Buyers are sceptical of AI that acts autonomously. The accepted posture is suggestive intelligence with a visible audit trail and human approval, which is how Global Office is built.

2. Design partner program

Element	Commitment
Cohort size	30–50 organizations across anchor markets
Term	90-day structured pilot with defined success criteria
Pricing	Discounted founding rate locked for 24 months
Partner obligation	Weekly usage, a monthly feedback session, and a reference call on success
Our obligation	Migration support, named contact, and prioritized roadmap influence

3. Success criteria

- At least 60% of pilots reach weekly active operational usage by day 30.
- At least three incumbent tools retired per converted customer.
- Measured conversion from pilot to paid above 35%, with documented reasons for every loss.
- A published cohort retention and expansion baseline at day 180.

4. How feedback enters the product

Every pilot organization runs on the same production platform. Feedback is captured in the support and memory systems, triaged against the roadmap, and released continuously. Because the intelligence layer learns from approved and rejected recommendations, design-partner judgment becomes a

durable asset rather than a support ticket.
