

SOTERIA AI TECHNOLOGIES INC. · DELAWARE C-CORPORATION

Go-To-Market Strategy

Wedge, expansion and vertical motion for an AI-native operating layer.

Global Office, a product of Soteria AI Technologies Inc. (a Delaware C-Corporation), enters the market through a narrow operational wedge and expands into the full intelligence layer once the organization's data is inside the graph.

1. Ideal customer profile

- Organizations of 20–200 people where coordination overhead is already painful but enterprise suites are unaffordable or over-configured.
- Global-first: United States, United Kingdom and European Union mid-market as primary willingness-to-pay markets, with an emerging-markets expansion motion led from the Africa engineering center.
- Buyer is the founder, COO or operations lead — a single economic buyer with authority to consolidate tools.

2. The wedge

We do not sell a fifteen-module suite on first contact. The wedge is execution and attendance: the two surfaces that produce the highest-frequency operational signal. Once tasks, people and time are inside the graph, the intelligence layer has enough context to produce insight the customer cannot get elsewhere, and expansion to documents, meetings, HR and finance follows the data rather than the sales pitch.

3. Sequenced motion

Phase	Focus	Objective
Year 1	Design partners	30–50 pilots, founder-led sales, measured activation and CAC
Year 2	Adjacent segments	Professional services, agencies and distributed teams; partner channel
Year 3	Vertical editions	Configured editions where compliance and audit trails command premium pricing

4. Channels

- Founder-led outbound to a curated list, prioritizing depth of feedback over volume in year one.
- Product-led trial with a guided demo and an interactive tour, converting self-serve interest into qualified pilots.
- Partner channel through accountants, HR consultancies and managed service providers who already sit inside the operational stack.
- Category content: the intelligence-layer thesis published as research, briefs and public product walkthroughs.

5. Pricing

Per-organization subscription with three tiers and metered AI credits above an included allowance. Pricing is quoted in local currency in emerging markets to remove FX friction. The metered component means revenue expands with intelligence consumption, not only with headcount.

6. What we measure

- Activation: percentage of pilots with weekly active operational signal by day 30.
- Consolidation: number of incumbent tools retired per customer.
- Expansion: AI credit consumption and tier upgrades over the first two renewal cycles.
- Efficiency: CAC payback and gross-margin-adjusted LTV per cohort.
